GALLAGHER™

FLEXIBLE, SCALABLE PERIMETER SECURITY TO SUIT YOUR NEEDS

Globally recognized as technology experts in the design and manufacture of integrated access control, central management software, alarms management, and perimeter protection, Gallagher's security solutions protect valuable assets around the world.

The Gallagher Perimeter Security Solution is your first line of defense with effective and safe electrified-fencing and non-electrified fencing options including:

- Full-height fencing
- Wall top fencing
- Gate fencing

- Roof or fence-top fencing
- Multi-layered fencing
- A customized, multi-layered combination of fencing.

Streamline your security and business management systems through one smart platform.

The Gallagher Integrated Perimeter Solution delivers a range of networked perimeter security technologies from basic site and asset protection to high-risk security installations for military, corrections, critical infrastructure, and more.

- Centralize the monitoring and control of security across multiple sites across the country or world through one central management platform, from one location.

- Achieve business compliance with a system that does more than just access and barrier protection by mitigating business risk such as health and safety, and regulation compliance.

- Have full control over where and when your staff, visitors, and vehicles can move around your site

- Have independently managed perimeter zones for more accurate detection and response.

- Use disturbance sensors that heighten perimeter security through intelligent intrusion detection on your front line.

- Have a single management platform for central or distributed alarms control across multiple sites.

- Capture visual records of events through integration with central imaging systems.

Integration and support:

- Third party APL component options
- Intruder alarms
- Imaging systems (DVR, NVR, CCTV)
- HVAC Systems (Heating, Ventilation, Air Conditioning).

Electrified fencing options - is it safe?

Electric fencing is safe, and while it is powerful enough to deter the most persistent of intruders, the high voltage pulse being delivered down the wire is not life threatening. This pulse of electricity conforms with all national and international fencing standards, most importantly IEC 60335-2-76, and keeps your site secure even when its unmanned. Electric fencing still continues to be the most effective and popular deterrent worldwide.
